Control unit 1 - 10 V, 4-gang with manual actuation for KNX

GIRA Data sheet

Specification	Order No.	Packing unit	PS	EAN
DRA	2224 00	1	26	4010337018858

Features

- The control unit switches and dims electrical devices that feature a 1–10 V interface.
- Five device configurations can be selected. This leads to the assignment of four individually-controllable dimming channels to the switching outputs (e.g. four dimming channels are assigned to one switching relay to control a RGBW light).
- Relay outputs that are not associated with a dimming channel can be used as freely-acting switching actuator channel.
- Reactions in case of bus voltage failure and restoration can be set following an ETS programming process.
- Manual actuation of the outputs independently of the bus with mechanical switching position indicator.
- Delay for actively transmitted feedback messages following bus voltage recovery.
- Logical linking function configurable per channel.
- Up to three central switching functions for the joint control of all dimming and switching channels.
- Switch-on times of the relay outputs can be recorded and evaluated by the elapsed-hours meter.
- Group feedback of all switching conditions possible.

Dimming channels

- Four individually-controllable dimming channels.
- Feedback on switching condition and brightness value.
- Dimmable brightness range can be set.
- Dimming behaviour and dimming characteristics can be parameterised.
- Soft switch-on and soft switch-off function
- Block function or forced setting function can be parameterised.
- Time functions (switch-on delay, switch-off delay, staircase light function). With the staircase light function, the reaction at the end of the switch-on time can be configured.
- Inclusion of a dimming channel in up to ten scenes is possible.
- The burning-in function allows for the commissioning of new fluorescent lamps prescribed by lighting manufacturers.

Switching actuator operation (optional)

- Independent switching of switch outputs A2 to A4.
- NO contact or NC contact operation.
- Feedback from the switching condition.
- Block function or forced setting function can be parameterised.
- Time functions (switch-on, switch-off delay, staircase light function also with advance warning function).
- Can be integrated in the light scenes. Up to ten internal scenes per switching output are programmable.

- Cyclical monitoring of incoming switching telegram is configurable.

Technical data

KNX medium: TP256

Relay

- Quantity:

- Contact: 1 x zero-voltage NO contact each, flip-flop

Control outputs

Control voltage: 1 to 10 V
 Control current per output: max. 100 mA

- Cable length: max. 500 m with 0.5 mm²

Switch outputs

- Switching voltage: AC 250/400 V

- Switching current 230 V AC1: 16 A
- Switching current 230 V AC3: 10 A
- Switching current 400 V AC1: 10 A
- Switching current 400 V AC3: 6 A
- Fluorescent lamps: 16 AX

Lamp loads

Light bulbs: 3680 W
HV halogen lamps: 3680 W
Wound electronic transformer: 2000 VA
Tronic transformer: 2500 W

Fluorescent lamps T5/T8

- Uncompensated: 3680 W - parallel compensated: 2500 W/200 µF - Duo-circuit: 3680 W/200 µF

Compact fluorescent lamps

- Uncompensated: 3680 W - parallel compensated: 2500 W/200 µF

Mercury-vapour lamps

- Uncompensated: 3680 W

- parallel compensated: 3680 W/200 μF

Ambient temperature: -5 °C to +45 °C

Connections

- KNX: Connection and junction terminal

- 1 – 10 V: Screw terminals - Load: Screw terminals

Connection cross section: Max. 4 mm²

Notes

- Electronic ballasts generate very high current spikes. For this reason, use a switch-on current limiter or a separate load contact for with greater loads.
