 stainless steel (lacquered)	2260 600	1/5	02	4010337021131

## Features

- Dimming top unit for use with System 2000 dimming inserts.
- Lighting in nine levels is controlled by lightly touching the operating surface, without the movement of mechanical elements.
- The lower half of the operating surface contains a blue status LED that lights up for orientation as long as the dimmer is switched off.
- When the operating surface is touched, the dimmer switches to the stored memory value.
- The upper half of the operating surface is divided into nine adjacent segments.
- Specifically touching these segment fields can control the lighting directly from the switched-off state or from any other dimming position.
- Lighting can glide to brighter or darker values by sliding your finger along the operating surface.
- The approximate dimming position is indicated with five blue LEDs.
