Switching actuator, 6-gang 16 A / blind actuator, 3-gang 16 A Standard for Gira One and KNX

GIRA Data sheet

Specification	Order No.	Packing unit	PS	EAN
DRA	5023 00	1	66	4010337061106

Depending on the parameterisation, the actuator can be used as a switching actuator or a blind actuator. Mixed configurations of switching and blind actuators are also possible. For the blind actuator function, two neighbouring relay outputs are combined to form one blind output.

Features

- Blind or switching operation can be parametrised. In blind operation, the adjacent outputs (A1/A2, A3/A4...) are combined into one blind output. Mixed operation at one actuator (e.g. A1 & A2 blind, A3 & A4 blind, A5 switching, A6 switching ...) is possible.
- Actively transmitting feedback or status messages can be delayed globally after a bus voltage recovery or ETS programming operation.
- Manual operation of the outputs independently of KNX with intelligent LED status displays for saving energy.
- Advanced manual actuation: Toggle between blind mode and switching mode before starting up the ETS.
- Heartbeat function for monitoring the device, cyclical transmission 1 bit.
- Bistable relay.
- Supply from KNX bus, no additional power supply required.
- Simplified terminal connection (no terminal overlapping).

Blind functions

- Operating mode can be parametrised: Control of slat blinds, roller shutters, awnings, skylights or ventilation flaps.
- Separately parameterisable movement times with movement time extension for movements into the upper end position.
- For slat blinds, a slat movement time can be parametrised independently.
- Switchover time for change of direction and times for short and long-term operation (Step, Move) can be set.
- Feedback on the curtain or slat position. In addition, feedback on an invalid curtain position or a drive movement is possible.
- Assignments of up to 5 different safety functions (3 wind alarms, 1 rain alarm, 1 frost alarm), or with cyclical monitoring. The safety functions (objects, cycle times, priority) are created in a device-based manner for all outputs. An assignment of individual outputs to the safety functions and the safety reactions can be parametrised based on the channel.
- Blocking function can be implemented for each blind output.
- Simple sun protection: Sun protection function with fixed and variable curtain or slat positions at the beginning or end of the function can be activated separately for each output.
- Up to 16 internal scenes can be parametrised per output.
- Scene memory function: Additional visual feedback.
- Twilight function.
- Status messages for upper and lower end positions.

Switching functions

- Independent switching of the switching outputs.

GIRA Data sheet

- NO contact or NC contact operation.
- Switching feedback: transmitting to the bus cyclically or when there is a change.
- Logical individual linking function for each output.
- Reaction upon bus voltage recovery can be set for each output (ON or no reaction).
- Blocking function with feedback object can be parametrised for each channel.
- Time functions (switch-on and switch-off delay, staircase light function also with advance warning function).
- Integration into light scenes possible: Up to 16 internal scenes can be parametrised per output.

Technical data

KNX medium: TP256

Rated voltage

- KNX: DC 21 to 32 V SELV

Switching capacity: AC 250 V, 16 A / AC1

Maximum switch-on current: 800 A (200 µs), 165 A (20 ms)

Current carrying capacity of adjacent

outputs:

Total 20 A

Connected load

- Ohmic load: 3000 W

- Capacitive load: 16 A, max. 140 μF

- Motors (blind or fan): 1380 W - Light bulbs: 2300 W - HV halogen lamps: 2500 W - HV LED lamps: typically 400 W - Wound electronic transformer: 1200 VA - Tronic transformer: 1500 W 1000 VA - Fluorescent lamps, uncompensated: - Fluorescent lamps,lead-lag circuit: 2300 VA - Fluorescent lamps, parallel-compensated: 1160 VA

Fluorescent lamps, parallel-compensated: 1160 VA
Mercury-vapour lamps, uncompensated: 1000 W
Mercury-vapour lamps, parallel- 1160 W

 Mercury-vapour lamps, parallelcompensated:

Connections

- KNX: Connection and junction terminal

- Load: Screw terminals (max. 4 mm² or 2 x 2.5 mm²)

Current consumption

- KNX: 5 to 18 mA

Notes

- KNX Data Secure compatible.
- Fast application download (long frame support).
- Firmware can be updated using the Gira ETS Service App (additional software).
- Installation on DIN top-hat rail.
